Task Name: Mobile Order Management App

Objective:

Build a simple React Native app for waiters to manage orders efficiently.

Guidelines:

- **Write original code (no AI copy-pasting).**
- **Focus on usability and clean design.**

Requirements

1. Authentication

- **Login via phone number and OTP (simulate verification).**

2. Order Management

- **Pending Orders: List orders needing kitchen processing.**
- **Ready Orders: Show completed orders with an SMS notification button (mock functionality).**

3. Order Details

- **Display order info (status, type, price, ID, items, customer details).**
- **Full Refund button (requires managerial code).**

4. Multi-Language Support

- **Switch between English & Arabic.**

Bonus (Optional)

- **Persist login with AsyncStorage.**
- **Add smooth tab transitions.**

Submission:

- **GitHub repo with README.**
- **Simple, mobile-friendly UI.**

Evaluation:

- **Code quality**
- **State management**
- **UI/UX simplicity**
- **Functional completeness**
